Digital, app-less, lightning-fast parking payments

With GMP QR, your parkers scan a QR code to pay for their parking sessions via a white-label web app.

Features

- Superfast deployment with ready-made signage templates
- Manage all your users from one centralized solution
- Enforcement API to handle overstays and extensions
- Merchant on Record. Money deposited in your account in real-time
- Parkers can get started with just their phone numbers
- Send alerts and receipts via text or email
- Set up validations with your retail partners

Trusted By Market Leaders

One of South Florida's largest parking operators needed to set up digital payments in their locations, preferably through an app-less web platform. They wanted quick deployment without compromising the solution's functionality, reliability, or scalability.

GMP QR proved to be the perfect solution. They deployed it across hundreds of locations, opening a new revenue stream for the operator through convenience fees and validation usage. Their parkers can scan to pay for their sessions online using Apple Pay or any card through Google Pay when using Chrome as their browser of choice, making the parking experience faster and easier.
