AI Airport Parking and Curb Management **Built For Takeoff**

The Challenge:

Growing Traffic. Limited Curb. Rising Expectations.

As airport traffic increases and mobility patterns evolve, parking and curbside operations are under growing pressure to keep pace with peak-hour surges and unpredictable vehicle flows.

Airport curbs now serve ride-hail, taxis, shuttles, fleets, and private vehicles, all competing for limited space in real time.

-  Congestion at entry and exit damages passenger experience
-  Manual intervention drains staff time and increases errors
-  Uncontrolled dwell time leads to revenue leakage
-  Unpredictable arrivals create spillback and safety risks
-  Idling vehicles impact sustainability goals and airport reputation

Airports don't need more lanes. They need smarter flow.

Get My Parking delivers a frictionless, AI-powered parking ecosystem that eliminates congestion, increases throughput, and protects revenue, without increasing staffing. From arrival to departure, parking manages itself so your teams can focus on safety and passenger experience.

Built for the world's busiest terminals

The Solution: ExpressLane

ExpressLane replaces manual gate control with intelligent automation designed to perform at peak demand.

Using **AI-powered license plate recognition**, ExpressLane identifies vehicles instantly and keeps traffic moving even during high-volume surges. Entry and exit remain fast, ticketless, and touchless.

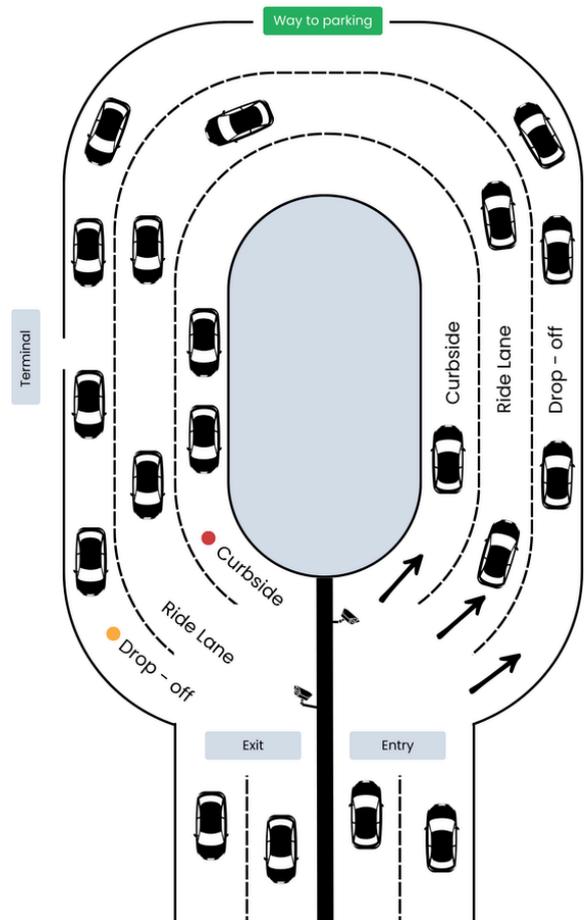

- ✈️ AI-powered license plate & vehicle identification
- ✈️ Distributed multi-lane traffic routing
- ✈️ Accurate session matching and dispute reduction
- ✈️ App & app-free options
- ✈️ Retrofit to save up to 90% on CapEx & future-proof infrastructure

ExpressLane transforms airport parking into AI PARCS

Access rules and pricing logic are applied automatically at the gate.

By digitizing every entry and exit, **airports gain full visibility** into usage patterns, unlocking opportunities to optimize pricing, protect revenue, and plan capacity with precision.

- Short stay - Drop Off lane
- Medium stay - Curb Lane
- Long stay - Parking Area

Smart Dwell-Time Pricing For Curb Management

Transparent pricing encourages faster turnover, captures short-term demand, and protects revenue without relying on staff intervention. Automated pricing logic adapts dynamically to **real-time traffic patterns**, helping airports maximize yield per lane while maintaining smooth curb flow.

Short stays Remain frictionless	Medium stays are priced predictably	Longer stays priced automatically
<ul style="list-style-type: none"> ✓ 0–7 minutes ✓ FREE ✓ Keeps curbside traffic flowing ✓ Encourages quick drop-offs & pickups 	<ul style="list-style-type: none"> ✓ 08–22 minutes ✓ FLAT RATE \$10 ✓ Captures short-term demand ✓ Predictable pricing for passengers 	<ul style="list-style-type: none"> ✓ 23+ minutes ✓ PER-MINUTE \$2 ✓ Stops misuse & increases turnover ✓ Protects revenue & optimizes space

Pricing logic runs continuously in the background, creating fair, consistent, auditable, and optimized revenue streams.

Revenue Maximization Through Digitization

ExpressLane enables airports to monetize previously unmanaged curb usage, reduce leakage, and increase yield without expanding physical infrastructure.

Get My Parking connects every parking use case through a single, unified platform. Reservations, permits, fleets, validations, EV charging, & more; every journey is digitized, centrally managed, and revenue-aware.

ExpressLane Supports:

-  Transient parking
-  Airport-issued permits, validations & reservations
-  Fleet, taxi, and rental vehicles
-  Reservations, permits, and validations created via 3rd party apps

Permits Designed for Airport Complexity

Airports manage thousands of **parkers**, including employees, frequent flyers, retailers, cab drivers, and logistics partners.

Get My Parking digitizes permit management end-to-end, reducing administrative overhead while ensuring smooth access.

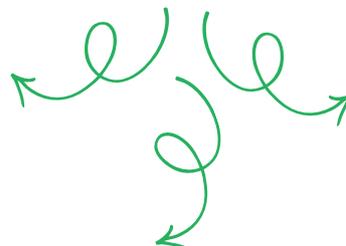

Flexible permits for hybrid schedules

Daily, weekly, and monthly maximums

Digitize permit management

Automated invoicing and bulk permit management

White-labeled self-serve portals for parkers

Seamless gate access with ExpressLane

Permit holders move freely. Operators stay in control.

Reservations That Reduce Uncertainty and Improve Planning

Airports can **offer advance parking reservations** through a fully white-labeled app or web experience, while also supporting **reservations** made through third-party platforms.

Travelers reserve parking with confidence, while operators gain predictability, better forecasting, and improved utilization.

-  Advance and **prepaid parking** reservations
-  Support for **third-party reservation** systems
-  **Real-time** availability and pricing
-  Vehicle and **payment** management

All reservations are honored automatically at entry and exit via ExpressLane.

Validations That Are Easy to Issue and Impossible to Miss

Airports work with airlines, retailers, lounges, hotels, and event partners who need a simple way to validate parking. **Get My Parking** digitizes validations end to end, ensuring they are applied accurately at exit, without manual checks or staff intervention.

-  Digital validations distributed through the **Partner Portal** for airport shops and vendors
-  Validations can also be issued in **advance** via email or app and saved directly to the passenger's phone
-  Support for airport-issued and third-party validations
-  Automatic application at exit via **ExpressLane**
-  Reduced disputes and revenue leakage
-  Full visibility and reporting for operators

Validations become effortless for partners, seamless for passengers, and reliable for operations.

Fleet and Commercial Traffic Without Bottlenecks

Taxi fleets, ride-hail vehicles, delivery partners, and commercial operators generate constant, high-frequency traffic across airport curbs and parking facilities. These vehicles drop off, pick up, and exit quickly, but when unmanaged, they create congestion, unsafe dwell behavior, and lost revenue opportunities.

Curb management and fleet traffic are tightly connected. Without visibility and automation, short-stay commercial traffic overwhelms limited curb capacity during peak periods.

-  License plate-based vehicle identification
-  Real-time tracking of entry, dwell time, and exit
-  Dynamic dwell-time pricing for short-stay traffic
-  Prepaid and bulk fleet parking options
-  Quota and zone management by vehicle type
-  Automated entry and exit without manual intervention

ExpressLane ensures high-turnover fleet traffic moves efficiently, clears curb space faster, and contributes to revenue rather than congestion.

Fast in. Fast out. Fully accounted for.

EV Charging, Built Into the Parking Journey

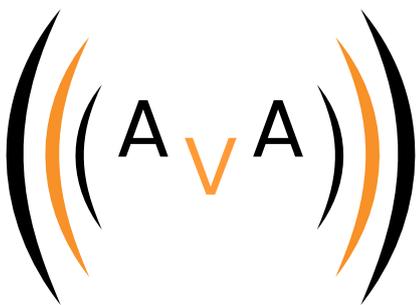

As airports evolve into mobility hubs, **Get My Parking** supports EV infrastructure without adding operational complexity.

- ✈ EV charger discovery within the parking experience
- ✈ QR-based charging sessions
- ✈ Integrated payments
- ✈ Real-time energy usage reporting
- ✈ OCPI-compliant integrations

Future-ready parking, delivered seamlessly.

Intelligent Support with AVA

AVA adds an intelligence layer that enhances both customer service and operational efficiency across airport parking and curb management.

By combining real-time session data, automated alerts, and contextual insights, AVA enables faster dispute resolution, instant visibility into vehicle activity, proactive anomaly detection, and reduced manual investigations. Airport teams lower support costs, resolve passenger issues more quickly, and gain data-driven decision support across terminals.

ExpressLane automates traffic flow. **AVA** strengthens operational control.

Automation That Pays for Itself

Operational benefits

-  Reduced manual gate operations
-  Faster turnarounds and smoother traffic flow
-  Staff redeployed to higher-value tasks

Environmental benefits

-  Reduced idle time and emissions
-  Cleaner terminal roadways
-  Improved passenger experience

For airports processing **10,000 vehicles** daily, reducing average dwell time by **just 2 mins** can eliminate thousands of idle hours annually, significantly lowering carbon emissions while increasing curb capacity and revenue potential.

Less congestion. Lower cost. Higher yield. Better experience.

One Platform. Total Control.

All parking activity is managed from a single, centralized dashboard.

-  Real-time visibility across terminals and locations
-  Automated reporting and performance analytics
-  Centralized rate, permit, reservation, and validation management
-  Secure, GDPR-compliant data infrastructure
-  Role-based access for teams and partners

Complex operations become simple to manage, unlocking measurable revenue optimization across **parking and curbside operations**.

Fully White-Labeled for the Airport Brand

The solution is delivered as a completely branded airport parking service.

-  Custom-branded apps and web portals
-  Airport colors, logos, and design systems
-  API integrations with airport services and third-party platforms
-  Full ownership of customer and transaction data

Passengers experience parking as part of the airport, not a third-party system.

Proven. Scalable. Airport-Ready.

Get My Parking and **ExpressLane** are already operating at major airports, processing millions of transactions with enterprise-grade reliability.

-  **99.5 percent** uptime across deployments
-  High passenger **satisfaction** ratings
-  Designed to meet **global regulatory standards**

This is proven airport automation, built to perform at scale.

Upgrade your Parking Experience to First Class

Make sure that parking is the last thing that visitors at your airport worry about. With **GMP solutions**, every visit to your **airport** starts and ends with a **happy parking experience**.
